

Construction Supervision Request Form

Question: Why Do Most Projects Fail?

Unrealistic Estimates, Schedule slippage, quality issues and budget overruns are the familiar symptoms of a project in trouble. This would lead to an addition cost on the Home Owner to complete his/ her building. An exciting venture of having to build a dream home can become nightmare if the right measures are no put in place. WilsonArts has recognised the need for representation on the Customers Part to ensure that the engineering standards are followed, to ensure that estimates that are presented are realistic and to capture the impact of project changes on the budgeted cost as the Project progresses. Many Home Owners are not capable supervising their project due to lack of technical ability and due to time constraints because of their jobs. The Value gained and the cost savings generated would offset the cost of this affordable supervision and would ensure the success of your our customers project.

Personal Information

Full Name: _____
